

```
// Write function declarations for the following.

// 1. compute maximum of two integers

// 2. Print the string with maximum length, in the given two strings

// 3. convert integer to string

// 4. find the second maximum of given array of integers

// 5. remove the n-th word from the given sentence

// 6. convert number to hexadecimal and return as string

// 7. find number of format specifiers in the given string

struct student {
    char name[24];
    int roll_number;
    int marks;
};

// 8. find the student with maximum marks in the given collection of students

// 9. find the average of all the students marks

// 10. print the name of the given student

// 11. sort students based on marks in non-decending order
```
